

A Needle Pulling Thread Magazine Correction Notice

Notice Date: 1March2011

Issue: Spring 2011 (Volume 6 Issue 1)

Item: *Beading Basics* by Diane Mugford – page 83

The 3rd to last paragraph should read as follows:

Nymo - Probably the most common bead thread you will find is “Nymo” it is a nylon thread and comes in many colours as well as black and white. Nymo has sizes A through D with D being the finest and A being a bit thicker and stronger. I tend to use size D for a project where I know I will need to go through a bead many times and size B when I will be going through a bead up to three times.
